1 Safety instructions

1.1 Symbols used in these operating instructions

Danger
This symbol represents an immediate hazardous situation which could result in **serious injury, death** or **damage to the equipment**. Where this symbol is shown, do not use the equipment further unless you have fully understood the nature of the hazard and have taken the required precautions.

Danger
This warning refers to an immediate danger when using the equipment in a hazardous area.

Attention
This symbol indicates important instructions which should be respected in order to avoid damaging or destroying the equipment. Follow the the precautions given in these instructions to avoid the hazard. Call our service team if necessary.

Call service
Where this symbol is shown call our service team for advice if necessary.

Note
This symbol indicates a note or detailed set-up tip.

Information point.

<BRK> Operator keys are printed in bold typeface and placed in pointed brackets.

1.2 Safety instructions for the operator

These safety instructions are applicable for sensor type K1Ex/K4Ex and KF170 transmitter installations in hazardous areas.

- Do not install, operate or maintain this flowmeter without reading, understanding and following the operating instructions, otherwise injury or damage may result.
- Study these operating instructions carefully before the installation of the equipment and keep them for future reference.
- Observe all warnings, notes and instructions as marked on the packaging of the equipment and detailed in the operating instructions.
- Do not change or alter the sensors or the transmitter. Unauthorized changes may affect the explosion safety of the equipment.
- The special conditions of use as described in the EC type examination certificate must be followed. In addition, all given electrical specifications must be met.
- The electrical installation must be in accordance with applicable national standards (equivalent to IEC 364) in addition to the requirements for installation in hazardous areas according to EN/IEC 60079-14 "Electrical installations in hazardous locations" or equivalent national standards.
- Installation, operation, service and maintenance of the equipment must only be performed by authorised and trained personnel with the necessary knowledge and qualifications in explosion safety.
- If the product does not operate normally, please refer to the service and troubleshooting instructions, or contact KATRONIC for help.

1.3 Languages/translations

These safety instructions are compiled in English. If English is not your native language and you have difficulties understanding the content of these instructions, please contact KATRONIC and/or your authorised local distributor for a translation of this text.

1.4 Warranty

- Any product purchased from KATRONIC is warranted in accordance with the relevant product documentation and as specified in the sales contract provided it has been used for the purpose for which it has been designed and operated as outlined in the operating instructions. Misuse of the equipment will immediately revoke any warranty given or implied.
- Responsibility for suitability and intended use of this ultrasonic flowmeter rests solely with the user. Improper installation and operation of the flowmeter may lead to a loss of warranty.
- Please note that there are no operator-serviceable parts inside the equipment. Any unauthorised interference with the product will invalidate the warranty.

1.5 Return policy

If the flowmeter has been diagnosed to be faulty, it can be returned to KATRONIC for repair using the Customer Returns Note (CRN), a copy of which can be found in Appendix B of this manual. KATRONIC regret that for Health & Safety reasons we cannot accept the return of the equipment unless accompanied by the completed CRN.

1.6 Legislative requirements

CE marking

The flowmeter is designed to meet the safety requirements in accordance with sound engineering practice. It has been tested and has left the factory in a condition in which it is safe to operate. The equipment is in conformity with the statutory requirements of the EC directive and complies with applicable regulations and standards for electrical safety EN 61010, hazardous area equipment 94/9 EC (ATEX100a) and electro-magnetic compatibility EN 61326. A CE Declaration of Conformity has been issued in that respect, a copy of which can be found in Appendix B of these operating instructions.

WEEE Directive

The Waste Electrical and Electronic Equipment Directive (WEEE Directive) aims to minimise the impact of electrical and electronic goods on the environment by increasing re-use and recycling and by reducing the amount of WEEE going to landfill. It seeks to achieve this by making producers responsible for financing the collection, treatment, and recovery of waste electrical equipment, and by obliging distributors to allow consumers to return their waste equipment free of charge.

KATRONIC offers its customers the possibility of returning unused and obsolete equipment for correct disposal and recycling. The Dustbin Symbol indicates that when the last user wishes to discard this product, it must be sent to appropriate facilities for recovery and recycling. By not discarding this product along with other household-type waste, the volume of waste sent to incinerators or landfills will be reduced and natural resources will be conserved. Please use the Customer Return Note (CRN) in Appendix B for return to KATRONIC.

RoHS Directive

All products manufactured by KATRONIC are compliant with the relevant aspects of the RoHS Directive.

1 Introduction

Clamp-on transit-time flowmeter

The KATflow 170 is a fixed installation ultrasonic flowmeter designed for use in hazardous areas employing clamp-on sensors for the measurement of liquids in full, enclosed pipes. Flow measurements can be undertaken without interruption of the process or interference with the integrity of the pipeline. The clamp-on sensors are attached to the outside of the pipes. The KATflow 170 uses ultrasonic signals for measurement of the flow, utilising the transit-time method. The sensors of type K1Ex and K4Ex are equally suitable for use in hazardous areas. The KF170 flowmeter can only be used with ATEX or IECEx certified sensors.

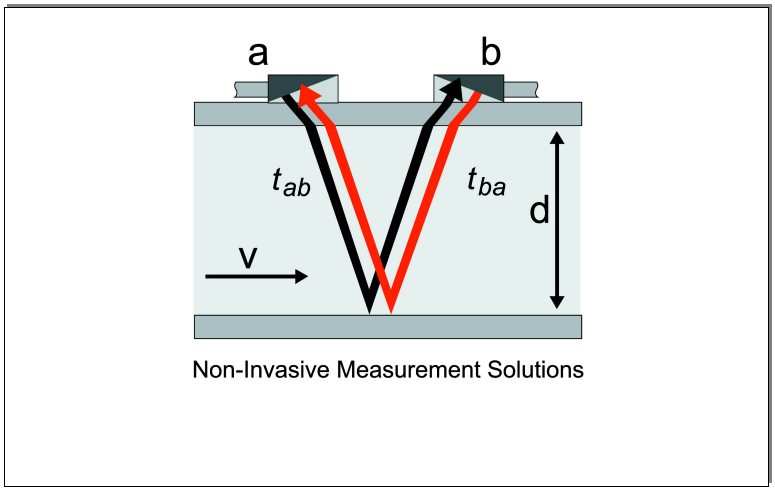

Illustration 1: Clamp-on ultrasonic flowmeter principle

Measuring principle

Ultrasonic signals are emitted by a transducer installed on a pipe and received by a second transducer. These signals are emitted alternately in the direction of flow and against it. Because the medium is flowing, the transit time of the sound signals propagating in the direction of flow is shorter than the transit time of the signal propagating against the direction of flow. The transit-time difference ΔT is measured and allows the determination of the average flow velocity along the path of acoustic propagation. A profile correction is then performed to obtain the average flow velocity over the cross-sectional area of the pipe, which is proportional to the volumetric flow rate.

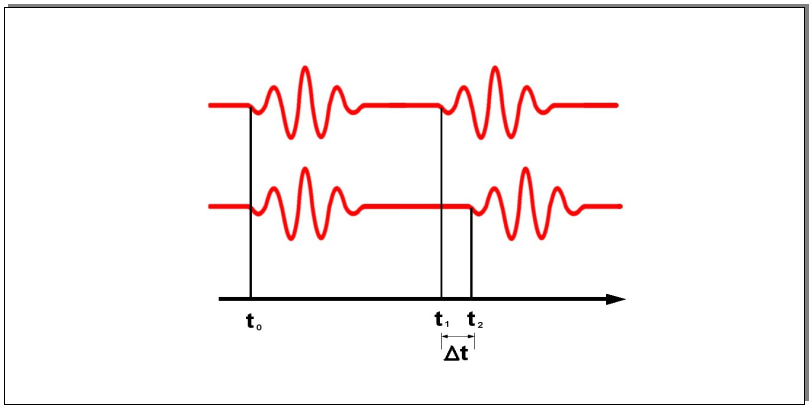

Illustration 2: Transit-time measuring principle

1.1 System configuration

The KF170 flowmeter and K1Ex and/or K4Ex sensors can be installed in Zone 1 or 2 hazardous areas with or without a certified optional junction box depending on the required cable distances. A maximum of 2 sensor pairs can be installed - if two pairs are installed these can be configured either in a 1-pipe dual-path or a 2-pipe single path configuration.

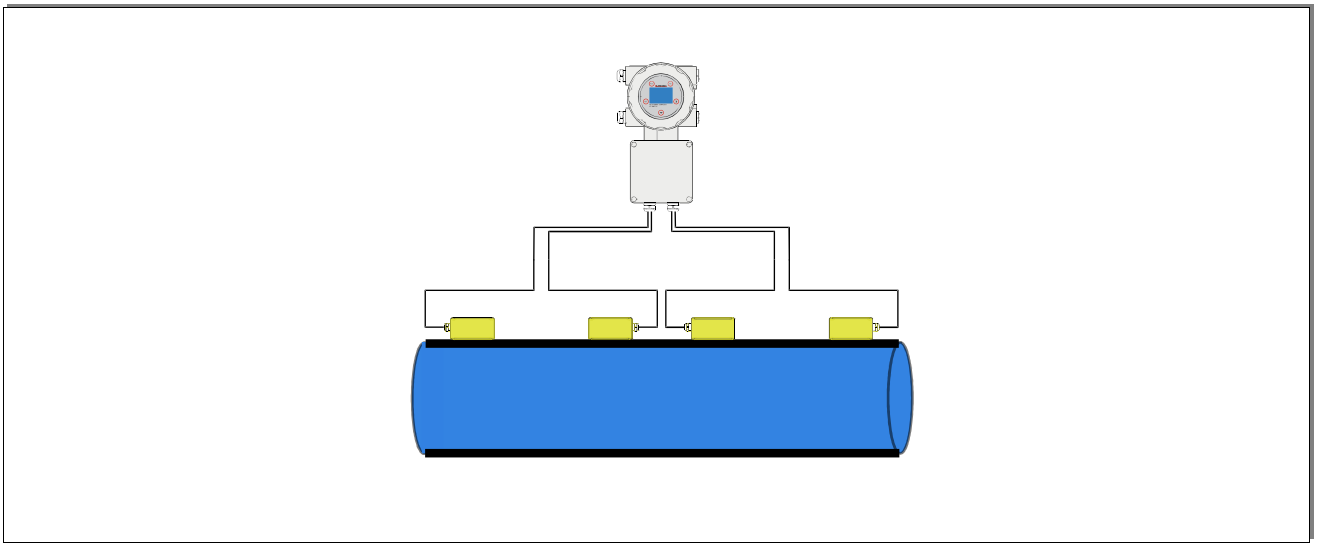

Illustration 3: KF170 with direct sensor connection in a 1-pipe 2-path configuration (Zone 1 or 2)

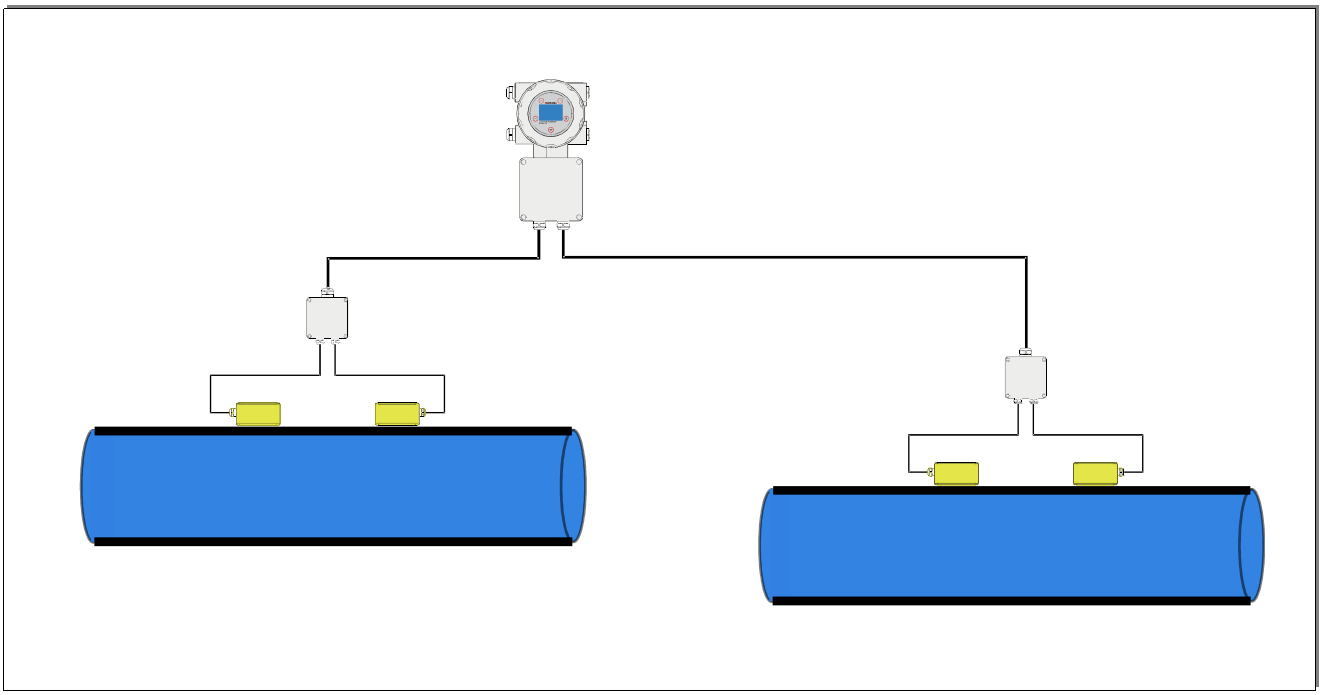

Illustration 4: KF170 2-pipe 1-path configuration using optional junction boxes(Zone 1 and 2)

1.2 Approvals

1.2.1 Clamp-on ultrasonic sensors

The clamp-on ultrasonic sensors are manufactured according to European Directive 94/9/EC (ATEX100a). The equipment is approved for installation and use in hazardous classified areas of Zone 1 and 2 by the certification agency TRaC (ATEX notified body identification 0891). The protection method for the sensors is “encapsulation” as per EN/IEC 60079-18.

The K1Ex, K4Ex transducers meet the requirements of the following standards:

Standard	Description
EN 60079-0 IEC 60079-0	Electrical equipment for use in explosive atmosphere – General requirements
EN 60079-18 IEC 60079-18	Electrical equipment for use in explosive atmosphere – Encapsulation “m”
EN 61241-0 IEC 61241-0	Electrical equipment for use in the presence of combustible dust – General requirements
EN 61241-1 IEC 61241-1	Electrical equipment for use in the presence of combustible dust – Protection by encupsulation “maD, mbD”
EN 61241-18 IEC 61241-18	Electrical equipment for use in the presence of combustible dust – Protection by enclosures “tD”

Certificate number of the K1Ex and K4Ex sensors: **TRAC 09 ATEX 21226 X**

1.2.2 Flowmeter

The KATflow 170 flowmeter is available in epoxy-coated aluminium or in stainless steel. Both versions are certified for use in hazardous area Zone 1 or 2. K1Ex and K4Ex sensors are connected to the KATflow 170 either directly or through an Ex e certified junction box with cables provided by KATRONIC.

The protection method for the KF170 is “explosion-proof” Ex d and “increased safety” Ex e as per the following standards:

Standard	Description
EN 60079-0 IEC 60079-0	Electrical equipment for use in explosive atmosphere – General requirements
EN 60079-1 IEC 60079-1	Electrical equipment for use in explosive atmosphere – Flameproof “d”
EN 60079-7 IEC 60079-7	Electrical equipment for use in explosive atmosphere – Increased safety “e”
EN 61241-0 IEC 61241-0	Electrical equipment for use in the presence of combustible dust – General requirements
EN 61241-1 IEC 61241-1	Electrical equipment for use in the presence of combustible dust – Protection by enclosures “tD”

Certificate of the KF170 transmitter: **EPS 11 ATEX 1355 X**
Certification coding: **II 2G Ex db eb IIA/IIB T6**
Flowmeter certification label:

1.3 Temperature Limits

1.3.1 Clamp-on ultrasonic sensors

The K1Ex and K4Ex clamp-on ultrasonic sensors can be used for the following process temperatures depending on the Temperature Class specified for the application:

Gas groups:

Temperature Class	Process temperature range
T6	-50 ... +75 °C
T5	-50 ... +90 °C
T4	-50 ... +115 °C

Dust groups:

The ambient temperature is the limiting factor but cannot exceed +115 °C therefore the max. temperature designation is T80°C - T120°C.

1.3.2 Flowmeter

For KF170 flowmeters located in Zone 1 or 2 hazardous areas the ambient temperature range is -20 ... 60 °C. The unit is manufactured to a degree of protection of IP 66.

1.4 Special conditions of safe use

- The transducers must only be used in conjunction with a flowmeter unit (e.g. KF170) which conforms to the signal parameters and thermal protection conditions as outlines in the special conditions of safe use.
- The transducers must be securely fixed to the pipe to protect the PEEK surface of the sensors from mechanical impact and electrostatic charging.
- Where the connecting cable may be subject to mechanical damage then the user shall provide additional mechanical protection.
- Clause 7.9.2.1, EN60079-18: The circuitry must be protected from a mains transient fault by fuses and they shall be rated in accordance with IEC 60127 or ANSI/UL 248-1, the fuse time-current characteristic shall ensure that the Continuous Operating Temperature of the encapsulating compound and temperature class are not exceeded and shall have a breaking capacity greater than 1500 A. In addition, the fuses shall be non-resettable and shall only be replaced by opening the enclosure. The separation distance across the fuse shall meet Table 5 of EN60079-11 (met by KF170 electronics).
- Clause 10, EN60079-18: The pulsed supply to the transducers must not exceed 330 V at a maximum frequency of 4 MHz (met by KF170 electronics).

1.5 EC type examination certificates

See ATEX documentation pack.

2 Installation

2.1 Unpacking and storage

2.1.1 Unpacking

Care should be taken when opening the box containing the flowmeter, any markings or warnings shown on the packaging should be observed prior to opening. The following steps should then be taken:

- Unpack the flowmeter in a dry area.
- The flowmeter should be handled with care and not left in an area where it could be subject to physical shocks.
- If using a knife to remove packaging care should be taken not to damage the flowmeter or cables.
- The flowmeter package and contents should be checked against the delivery note supplied and any missing items reported immediately.
- The flowmeter package and contents should be checked for signs of damage during transport and any problems reported immediately.
- The vendor accepts no responsibility for damage or injury caused during the unpacking of the instrumentation supplied.
- Excess packing materials should be either recycled or disposed of in a suitable way.

2.1.2 Storage

If storage is necessary, the flowmeter and sensors should be stored:

- in a secure location,
- away from water and harsh environmental conditions,
- in such a way as to avoid damage,
- small items should be kept together in the bags provided to avoid loss.

2.1.3 Identification of components

The following items are typically supplied (please refer to your delivery note for a detailed description):

- KATflow 170 ultrasonic flowmeter
- Clamp-on sensors (one pair for single channel operation, two pairs for dual channel operation)
- Ex e junction box if not direct sensor connection (one junction box for single channel operation, two junction boxes for dual channel operation)
- Sensor connection cable(s) if not direct sensor connection
- Sensor mounting accessories
- Coupling component
- Operating instructions
- Project and hazardous area documentation
- Calibration certificate(s) (optional)

2.2 Clamp-on sensor installation

The correct selection of the sensor location is crucial for achieving reliable measurements and high accuracy. Measurement must take place on a pipe in which sound can propagate (see Acoustic propagation) and in which a rotationally symmetrical flow profile is fully developed (see Straight pipe lengths).

The correct positioning of the transducers is an essential condition for error-free measurements. It ensures that the sound signal will be received under optimal conditions and evaluated correctly. Because of the variety of applications and the different factors influencing the measurement, there can be no standard solution for the positioning of the transducers.

The correct position of the transducers will be influenced by the following factors:

- diameter, material, lining, wall thickness and general condition of the pipe,
- the medium flowing in the pipe,
- the presence of gas bubbles and solid particles in the medium.

Check that the temperature at the selected location is within the operating temperature range of the transducers (see Specification).

After the sensor location has been selected, make sure that that supplied cable is long enough to reach the flow transmitter mounting location. Ensure that the temperature at the selected location is within the ambient operating temperature range of the flow transmitter (see Specification).

Acoustic propagation

Acoustic propagation is achieved when the flowmeter is able to receive sufficient signal from the transmitted ultrasonic pulses. The signals are attenuated in the pipe material, the medium and at each of the interfaces and reflections. External and internal pipe corrosion, solid particles and gas content in the medium contribute heavily to signal attenuation.

Straight pipe lengths

Sufficient straight lengths of pipe on the inlet and outlet of the measuring location ensure an axi-symmetrical flow profile in the pipe, which is required for good measurement accuracy. If insufficient straight lengths of pipe are available for your application measurements are still obtainable, but the certainty of the measurement can be reduced.

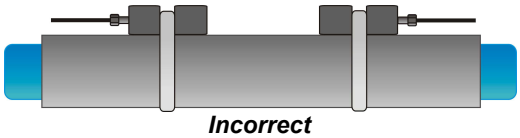
2.3 Installation location

Select an installation location following the recommendations in Table 1 and try to avoid measuring

- in the vicinity of deformations and defects of the pipe,
- near welding seams,
- where deposits could be building up in the pipe.

For a horizontal pipe:
Select a location where the transducers can be mounted on the side of the pipe, so that the sound waves emitted by the transducers propagate horizontally in the pipe. In this way, the solid particles deposited on the bottom of the pipe and the gas pockets developing at the top will not influence the propagation of the signal.

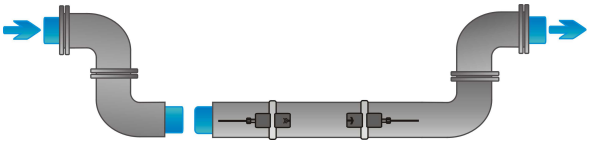
Correct



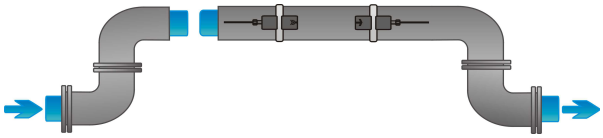
Incorrect

For a free inlet or outlet pipe section:
Select the measuring point at a location where the pipe cannot run empty.

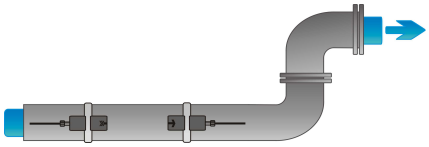
Correct



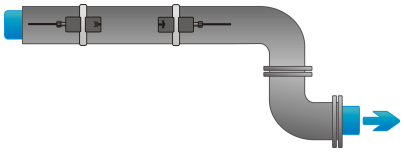
Disadvantageous



Correct



Disadvantageous



For a vertical pipe:
Select the measuring point at a location where the liquid flows upward to ensure that the pipe is completely filled.

Correct

Incorrect

Table 1: Recommendations for sensor mounting location

Look for a sensor installation location with sufficient straight pipe to obtain accurate measurements. Please refer to Table 2 as a guideline for recommended distances from disturbance sources.

Disturbance source: 90°-elbow

Table 2: Recommended distances from disturbance sources

2.4 Pipe preparation

- Clean dirt and dust from around the area of the pipework where the sensors are to be placed.
- Remove loose paint and rust with a wire brush or file.

Firmly bonded paint does not necessarily need to be removed provided the flowmeter diagnostics indicate sufficient signal strength.

2.5 Clamp-on sensor mounting configurations and separation distance

Reflection Mode

The most common clamp-on sensor mounting configuration is the Reflection Mode, sometimes known as V-Mode (see Illustration 3, sketch (1). Here, the ultrasonic signal passes twice through the medium (2 signal passes). The Reflection Mode is the most convenient mounting method as the transducer separation distance can be measured easily and the sensors can be accurately aligned. This method should be used whenever possible.

Diagonal Mode

An alternative mounting configuration (Illustration 3, sketch (3)) is the Diagonal mode (Z-Mode). The signals travel only once through the pipe. This method is often used for larger pipes where greater signal attenuation might occur.

Further variation of the Reflection and the Diagonal Modes are possible by altering the number of passes through the pipe. Any even number of passes will require mounting the sensors on the same side of the pipe, while with an odd number of passes, the sensors must be mounted on opposite sides of the pipe. Commonly, for very small pipes, sensor mounting configurations such as 4 passes (W-mode) or 3 passes (N-mode) are used (Illustration 3, sketch (2)).

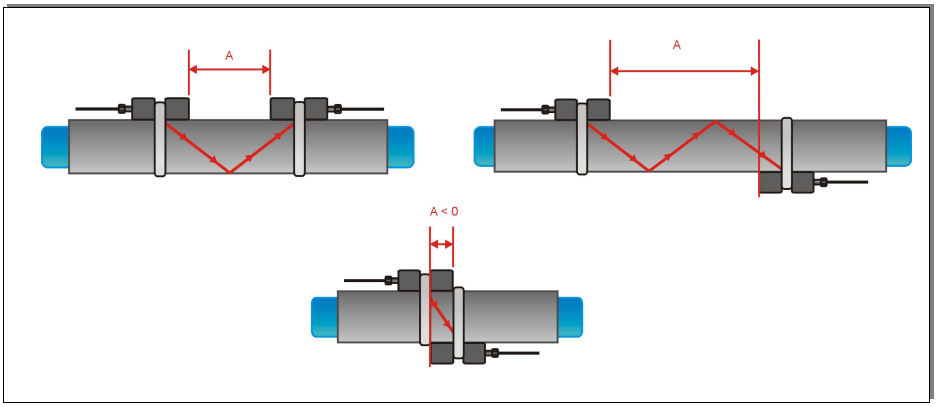

Illustration 5: Clamp-on sensor mounting configurations and sensor spacing

Transducer separation distance

The transducer separation distance A is measured from the inside edges of the sensor heads as shown in illustration 3. It is automatically calculated by the flowmeter based on the parameter entries for pipe outside diameter, wall thickness, lining material and thickness, medium, process temperature, the sensor type and the selected number of signal passes.

Sensor spacing

A negative separation distance A < 0 can occur for mounting configurations on small pipes where diagonal mode operation has been selected (see Illustration 3, sketch (3). Negative separation distances may be suggested for reflection mode installations, but are not possible. In these cases, use diagonal mode or a larger number of passes.

2.6 Sensor installation in hazardous areas

DANGER
The transducers must be securely fixed to the pipe to protect the PEEK surface of the sensors from mechanical impact and electrostatic charging.

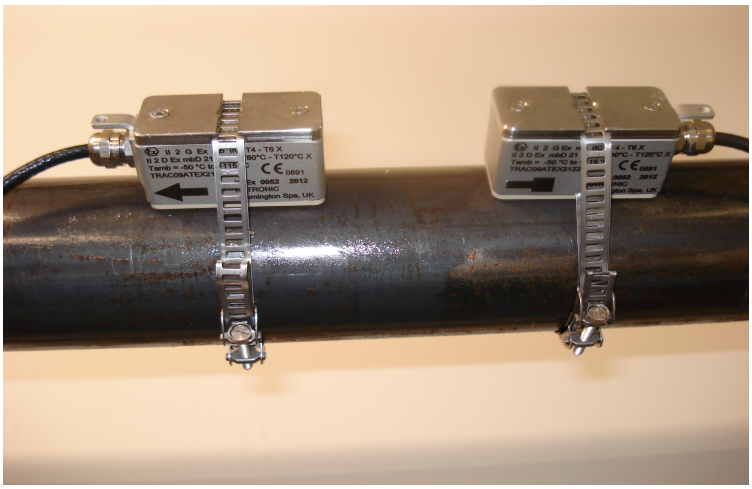

Illustration 6: Sensor mounting with tension straps and clamps

2.7 Flowmeter installation in hazardous areas

2.7.1 2” pipe mounting

The KATflow 170 is intended for 2” mounting pole installations as shown in the following picture. Wall mounting is also possible but requires an optional bracket.

Flowmeter 2” pipe pole mounting

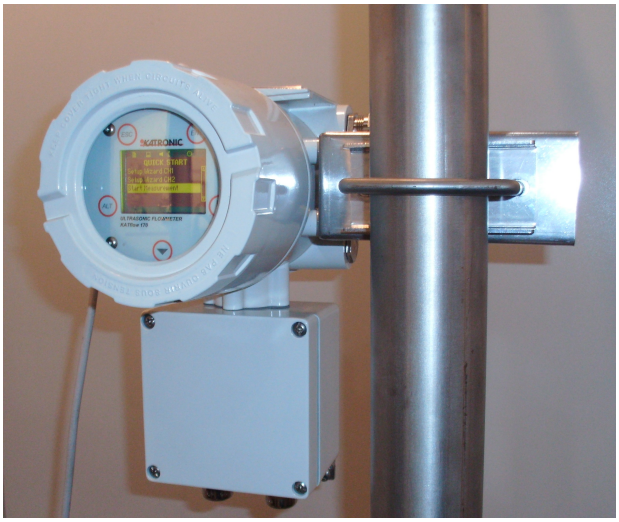

Illustration 7: 2” pipe mounted KF170

Flowmeter outline dimensions

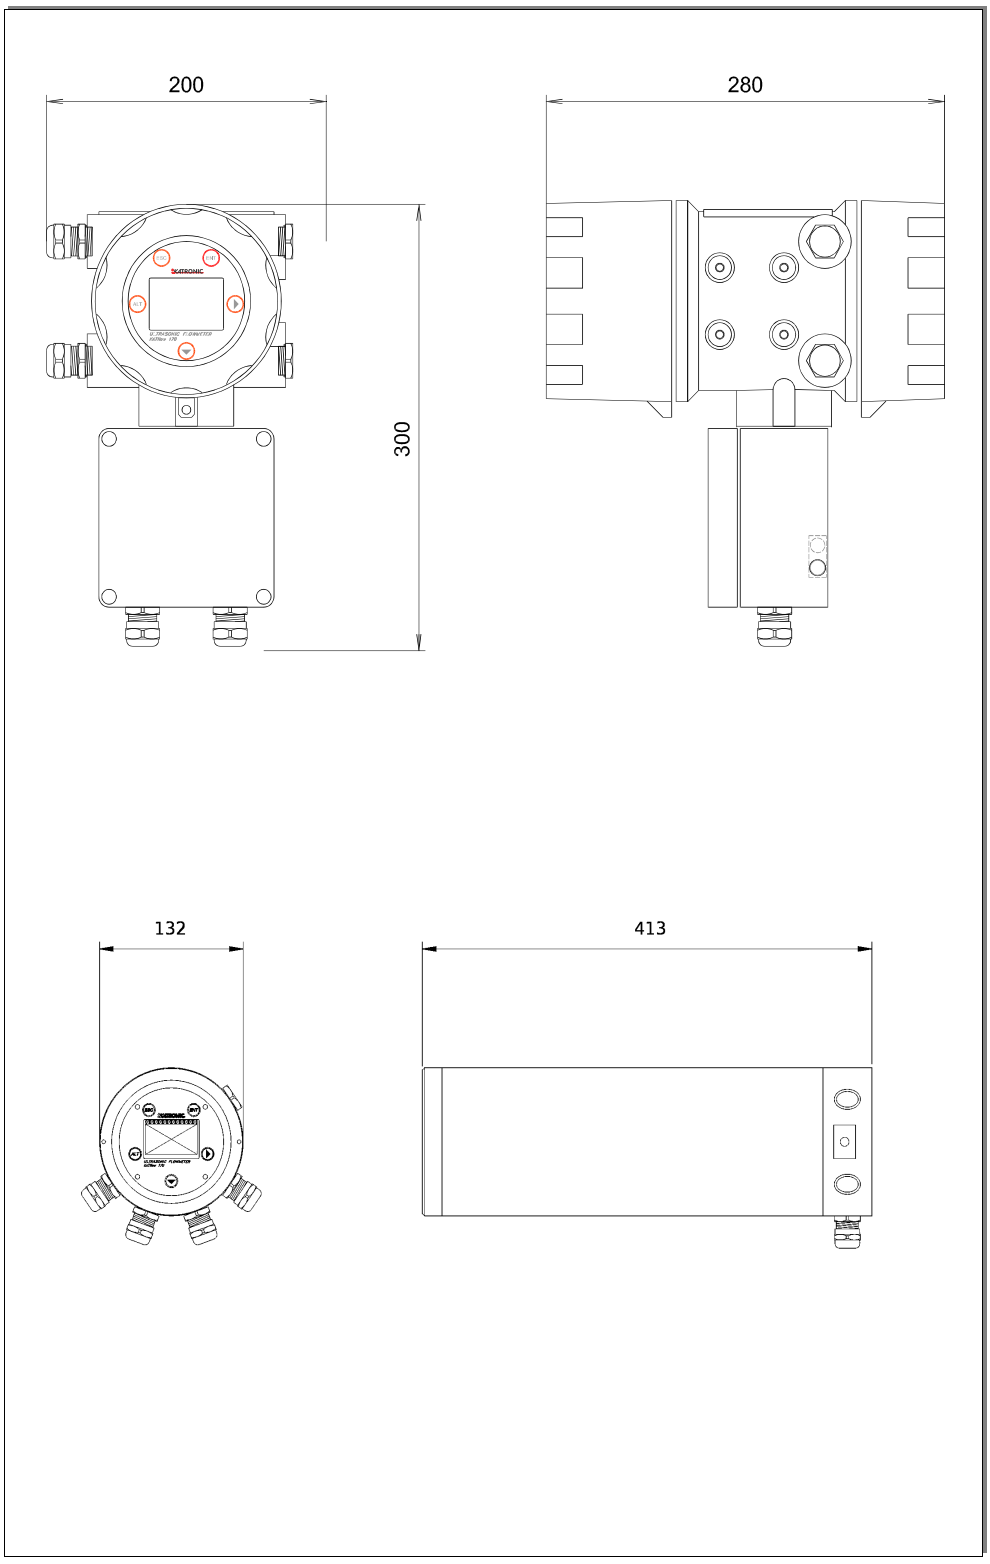

Illustration 8: KF170 Outline dimensions

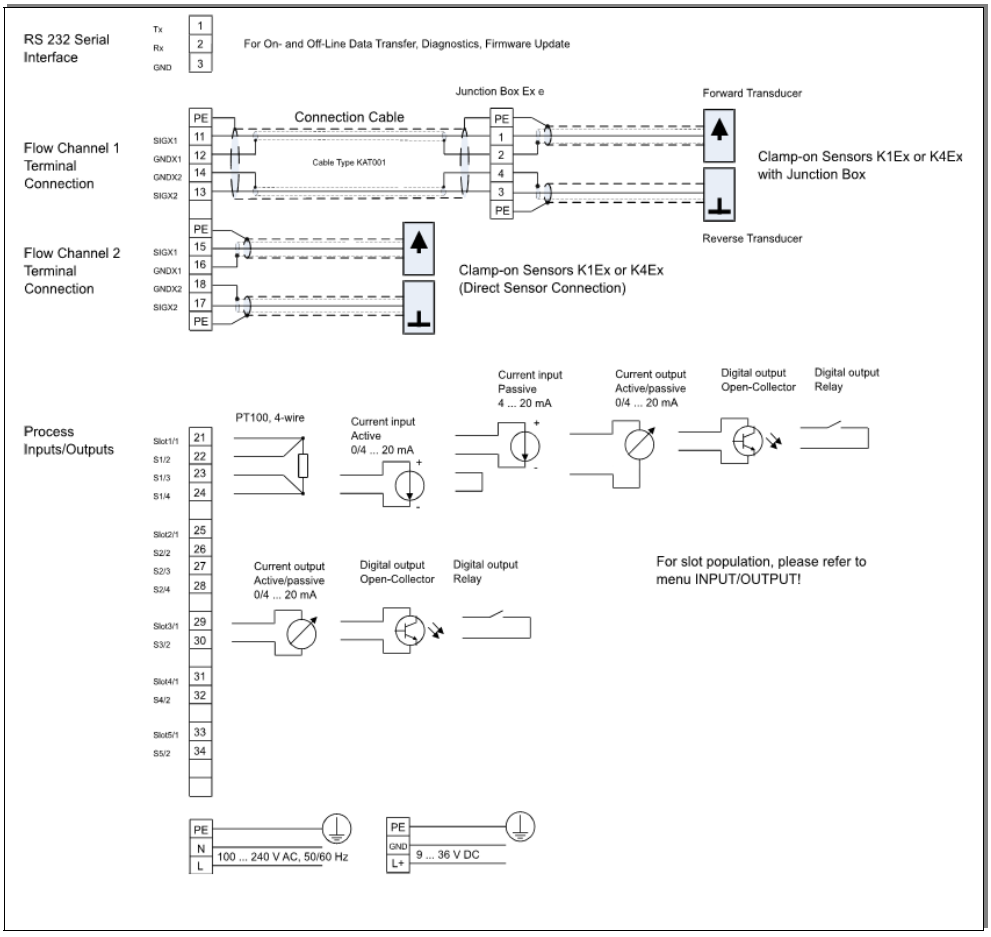
3 Electrical installation

The wiring of the equipment must be in accordance with the requirements as specified in the relevant national or international standard for electrical installations in hazardous areas, e.g. EN/IEC 60079-14. Section 9 (wiring systems) of this standard applies to all protection concepts. Section 10 (additional requirements for protection concept “d” - explosion-proof enclosures) and section 11 (additional requirements for protection concept “e” - increased safety).

Electrical wiring

Please note that in order to supply the unit with MAINS POWER, the equipment must be protected by suitably sized switches and circuit breakers.

100 ... 200 V AC, 50/60 Hz	10 VA
9 ... 36 V DC	10 W



Drawing 1: Electrical connection diagram for the KATflow 170 flowmeter

3.1 Cabling and junction box

The hazardous area K1Ex and K4Ex sensors are manufactured with a standard cable length of 5 m. If this cable length is sufficient for the application, then the sensors can be connected directly to the flowmeter (direct cable connection).

For installations requiring longer cable lengths, the sensors are terminated at an Ex e (increased safety) certified junction box with approved terminals.

The electrical connection between the junction box and the flowmeter (signal cabling) is established using type KAT01 dual coax cable. The cable ends of the coaxial cables must be appropriately terminated with tinned ends or suitably sized ferrules. The signal cable is provided with the system. The maximum recommended signal cable length is 100 m.

DANGER
Where the connecting sensor and/or signal cable may be subject to mechanical damage then the user shall provide additional mechanical protection.

3.1.1 Signal cable parameters

The signal cable supplied with the instrument has the following parameters:

Total attenuation	0.021 dB/m
Capacitance (core/screen)	107 pF/m
Inductance (core/screen)	0.24 µH/m

3.2 Cable glands

The KF170 housing features 2 x M20 cable entries for the sensor cabling and 4 x M20 cable entries for power supply, communication and process input/output connections.

The KF170 housing is supplied with plastic dust caps. The temporary plugs are only intended for sealing the equipment against entry of dust, moisture or other possible ingress during transport, handling and storage. These dust caps must be replaced by suitable Ex e approved cable glands, stopping plugs or conduit adapters with respective sealing before the flowmeter is put into operation.

The installer is responsible for the correct sizing and selection of the Ex e approved cable glands for the explosion-proof box. Unused cable entries must be closed with suitable Ex e blind plugs. Ex e approved cable glands/blind plugs are not part of the standard delivery package and must be provided by the customer or explicitly ordered from KATRONIC.

The following Ex e cable glands are available from KATRONIC:

Cable gland	Cable diameter	Cable type
M20	10 … 14 mm	Power, communication, process input/output
M20	7 … 12 mm	Power, communication, process input/output
M20	2 x 6 mm	K1Ex, K4Ex direct sensor connection
M20	12 mm	System cable KAT01 from junction box
M20	Bind plug	

3.3 Equipotential bonding

3.3.1 Clamp-on ultrasonic sensors

The K1Ex and K4Ex sensors feature a terminal connection which must be used to connect the transducers to the equipotential bonding system locally.

3.3.2 Flowmeter

The KATflow 170 flowmeter must always be incorporated in the equipotential bonding system of the hazardous area installation. The explosion-proof housing of the KF170 features a screw terminal outside the housing, which must be earthed locally.

The earthing conductor must be at least 4 mm^2 (11 AWG) or 2.5 mm^2 (14 AWG) when mechanically protected as per IEC 364-4-41.

3.4 Process inputs/outputs

If the process inputs/outputs are to be terminated in the hazardous area, the associated equipment must be certified accordingly.

3.5 Clamp-on sensor mounting

Sensor mounting

Before the sensors can be mounted

- the installation location should have been determined,
- a sensor mounting method should be chosen,
- the flowmeter must be mechanically and electrically installed,
- the sensors must be connected to the flowmeter.

Depending on which sensor mounting method is being used, the clamp on sensors are either mounted on the same side of the pipe (Reflection Mode) or on opposite sides of the pipe (Diagonal Mode). The sensor spacing is calculated by the flowmeter from the pipe parameters entered.

3.5.1 Sensor pipe mounting configurations

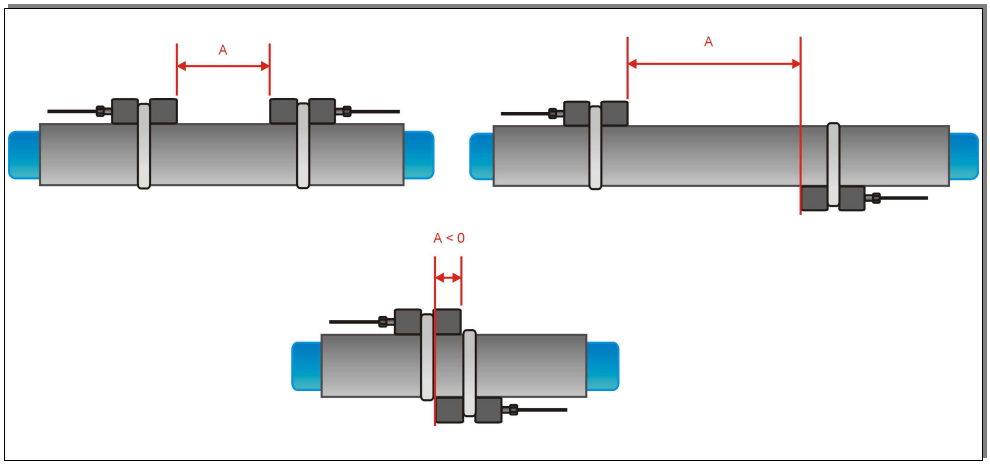


Illustration 9: Sensor pipe mounting configurations

3.5.2 Acoustic coupling gel

In order to obtain acoustical contact between the pipe and the sensors, apply a bead of acoustic coupling gel lengthwise down the centre of the contact area of the sensors.

3.5.3 Correct positioning of the sensors

Correct sensor position

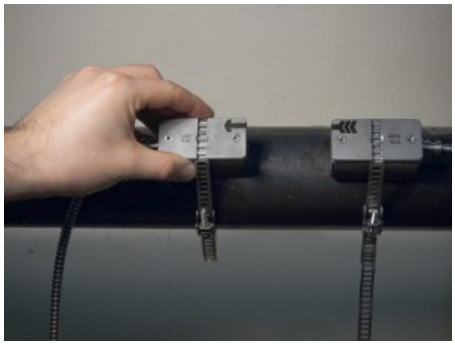

Illustration 11: Correct positioning of the sensors

Always mount the transducer pair so that the free front edges of the sensors face each other.

There is a different engraving on the top of each transducer. The transducers are mounted correctly if the engravings on the two transducers form an arrow. The transducer cables should point in opposite directions.

Later, the arrow, in conjunction with the indicated measured value, will help to determine the direction of flow.

The sensor separation distance is automatically calculated by the flowmeter based on the parameter entries for pipe outside diameter, wall thickness, lining material and thickness, medium, process temperature, the sensor type and the selected number of signal passes.

3.5.4 Sensor mounting with tension straps

Illustration 12: Metallic mounting straps

- Cut the tension straps to the appropriate length.
- Pull at least 2 cm of the tension strap through the slot in the clamp and bend the strap back to secure the clamp to the tension strap.
- Guide the other end of the tension strap through the groove on top of the sensor.
- Place the sensor onto the prepared pipe section.
- Hold the clamp on the transducer with one hand and guide the tension strap around the pipe.
- Pull the tension strap and guide the free end through the clamp so that the clamp hooks engage. Slightly tighten the screw on the clamp.
- Mount the second sensor in the same way.
- Press the sensors firmly to the pipe. There should be no air pockets between the transducer surface and the pipe wall.
- Using a measuring tape, adjust the sensor separation distance as suggested by the flowmeter. When the sensor positioning screen is displayed, the middle bar allows fine adjustment of the sensor location.

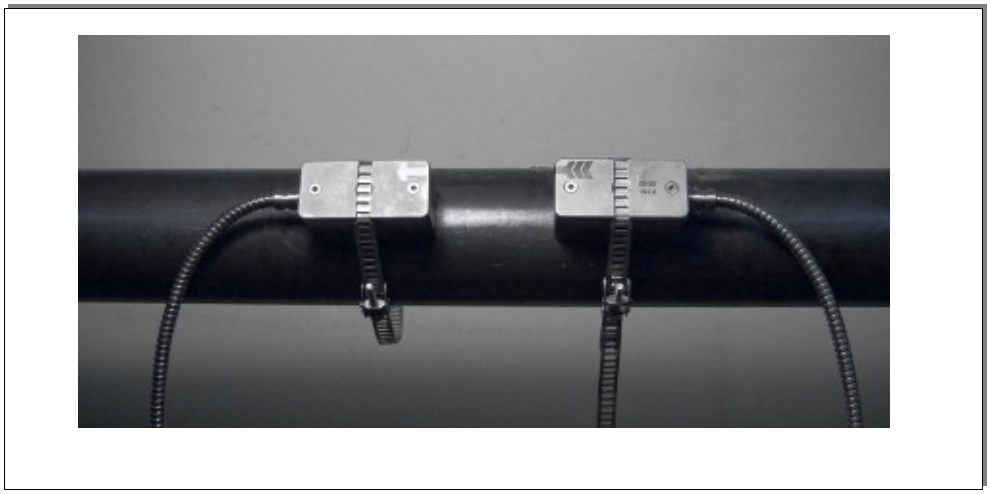

Illustration 13: Sensor mounting with tension straps and clamps

4 Operation

4.1 Switching On/Off

Switching On/Off

The flowmeter is switched on by connecting the power supply to the instrument. Disconnecting the external supply switches off the flowmeter.

4.2 Keypad and display

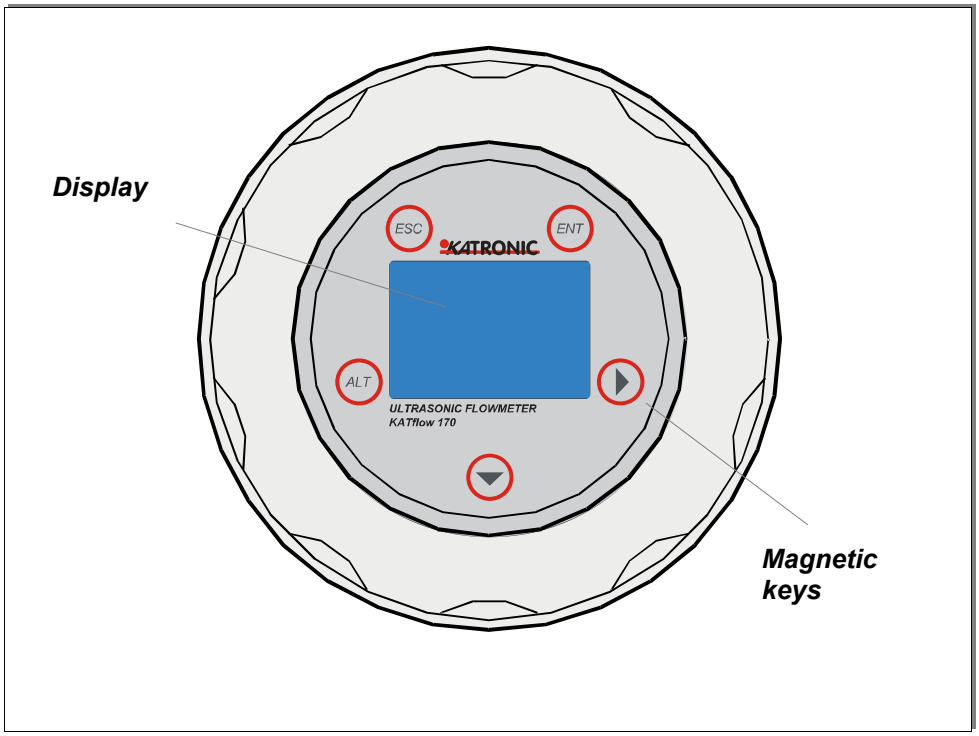

Illustration 14: Keypad and display overview

The keypad of the KF170 consists of 5 magnetic keys which can be operated from the outside of the enclosure using a magnetic pen. Hold the pen against the key area (red circle). The instrument acknowledges the activation of the key by turning the backlight off for a fraction of a second.

4.2.1 Keypad key functions

Key	Main function	Secondary function(s)
RIGHT Arrow	Character position selection for data entry. Move **RIGHT**.	Screen selection in measurement mode
DOWN Arrow	Move menu/list selection item **DOWN**	Character entry from scrolled characters, move in scrolled lists screen selection in measurement mode
ALT	Backlight on/off	
ESC	**ESC**ape menu item	Abort entry without saving, escape measurement mode
ENT	**ENT**er menu item	Confirm and save entry or move through menu structure

4.2.2 Display functions

Main measurement display

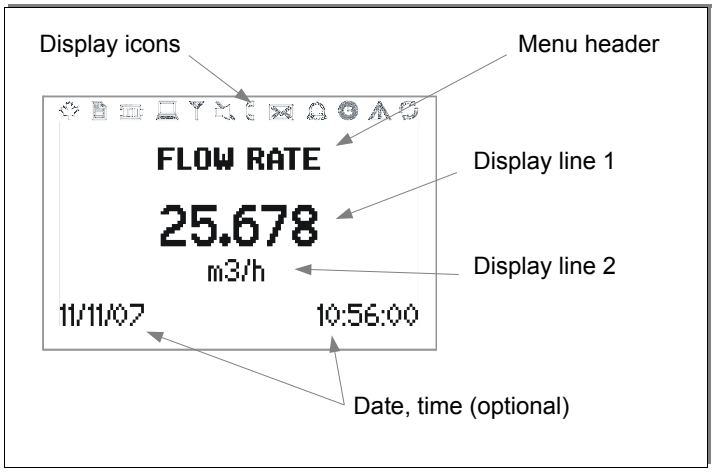

Illustration 15: Main display functions

Display icons

Display icon	Function	
	On **Off**	Not used
	On **Off**	Datalogger recording (where specified) Datalogger switched off
	On **Off**	Not used
	On **Off**	Backlight switched on Backlight switched off
	On **Off**	I/O processor error I/O processor functioning correctly
	On **Off**	Without strike-through: Speaker on With strike-through: Speaker off
	On **Off**	Poor sensor coupling, low SNR Sensor coupling OK
	On **Off**	Not used
	On **Off**	Not used
	On **Off**	Time/date set Clock error

Table 3: Display icons

	**On** **Off**	Error recorded in error log No error detected
	**On** **Off**	Serial communication on (where specified) Serial communication off
"L", "T" or "LT"	Displays whether flow is laminar, turbulent or mixed	

4.3 Quick setup wizard

Quick start wizard

The quick setup wizard allows for a speedy setup of the most important parameters in order to achieve successful measurements in the shortest possible time:

(Note : Applying the magnetic pen can be considered pressing a key)

Table 4: Quick setup wizard

Display screen	Operation
	The main menu is displayed after first power on and the boot-up sequence. Use <**DOWN**> cursor key to select **Quick start**. Confirm by pressing <**ENT**>.
	Use <**DOWN**> cursor key to select **Setup Wizard**. Confirm by pressing <**ENT**>. If sensors are recognised, the serial number will be shown. If not recognised or not connected, they may be selected from a list.
	Select units of measurement using <**DOWN**> cursor key and pressing <**ENT**>.
	Choose pipe material <**DOWN**> cursor key and pressing <**ENT**>.

OUTSIDE DIAMETER **76.1** mm	Enter outside pipe diameter using <**DOWN**> and <**RIGHT**> cursor keys and confirm by pressing <**ENT**>. Use the <**DOWN**> key to select the required number or decimal point, use the <**RIGHT**> key to change to a different decimal position. If 0 is entered, an additional screen appears that allows entering the pipe circumference.
WALL THICKNESS **3.4** mm	Enter pipe wall thickness <**DOWN**> and <**RIGHT**> cursor keys and confirm by pressing <**ENT**>.
FLUID Water Saltwater Acetone	Select fluid using the <**DOWN**> keys. Confirm by pressing <**ENT**>.
TEMPERATURE **20.0** C	Enter process temperature using <**DOWN**> and <**RIGHT**> cursor keys and confirm by pressing <**ENT**>.
LINER MATERIAL None Epoxy Rubber	Select pipe lining material using the <**DOWN**> key. Confirm by pressing <**ENT**>.
PASSES Auto 1 2	Select transducer configuration (number of passes) using the <**DOWN**> key. **Auto** Automatically **1** 1 pass, diagonal mode **2** 2 passes, reflection mode **3** 3 passes, diagonal mode **4** 4 passes, reflection mode **5** 5 passes, diagonal mode **6** 6 passes, reflection mode … etc. Confirm by pressing <**ENT**>.

	Sensor positioning screen: Mount transducers with suggested spacing and use middle bar for fine adjustment of position (central position is desired). Observe signal-to-noise (upper bar) and quality (lower bar). These should be of identical length. Confirm by pressing <**ENT**> to obtain measurements on screen. **Note:** *Numbers shown are for indication only.*

4.4 Measurements

4.4.1 Main process value (PV)

Measurement screens

Measurement is started using the Quick Setup Wizard. Once all the parameters are programmed, any subsequent power-on sequences will immediately give the main PV as a display and/or as an output as appropriate.

Display screen	Operation
	The main process value can be changed using accessing the menu structure. Press **<ESC>** at any time to view the main menu. Change to other measurement and diagnostic screens by pressing the <**RIGHT**> and <**DOWN**> keys.

4.4.2 3-line display format

Display screen	Operation
	The three-line display screen is configureable to show flow, totalizers and diagnostic functions. Change to other measurement and diagnostic screens by pressing the <**RIGHT**> and <**DOWN**> keys.

4.4.3 Diagnostic displays

Diagnostic screens are activated by pressing **<RIGHT>** and then **<DOWN>**.

Diagnostic screens

Display screen	Operation
DIAGNOSTIC 1 55.2 Gain **20.5 Signal** -10.0 Noise 11/11/07 10:56:00	Line 1 shows the amplifier gain. Line 2 displays the signal strength. Line 3 indicates the noise. Change to more diagnostic displays by pressing <**DOWN**>.

4.4.4 Totalisers

The totaliser displays will only be shown when the totalisers are activated.

Totalisers

Display screen	Operation
TOTALISER-1 - 0.0 m3 **0.0** + - 0.0 - 11/11/07 10:56:00	The flow totaliser can be started or reset by selecting “Totaliser” from the main menu. The totaliser can be viewed on the three line display as shown or by selecting a quantity as the middle unit. View the three line menu by pressing the <**RIGHT**> key.

4.4.5 Dual PV display (multi-channel meters)

Display screen	Operation
DUAL-1 37.3 **m3/h** 1.370 11/11/07 10:56:00	Line 1 shows the PV on the selected channel. Line 2 shows the selected units. Line 3 shows the PV on the other channel (in its selected units) Change to other measurement and diagnostic screens by pressing the <**RIGHT**> and <**DOWN**> keys.

4.4.6 "Math" display (when enabled on multi-channel meters)

Display screen	Operation
	Displays the "Math" function (when enabled). Sum, diffierence, average and maximum can be selected in the "Calculation" menu. "Average" shown in illustration. Change to other measurement and diagnostic screens by pressing the <RIGHT> and <DOWN> keys.

4.4.7 Datalogger

The datalogger is enabled from the Main Menu, and operates when a non-zero value is entered for the interval.
Items to be logged are selected from the “Selection” screen. “ENTER” selects items, “0” deselects. Up to ten items may be selected.
(Note : If no items are selected the logger will record blank space)
Send logger by serial port to a terminal program by selecting “Log download”.
Clear the logger by selecting “Log Erase”.

Logged data can be downloaded, viewed and exported using the KatData+ software except when "wrap" mode has been enabled.

5 Commissioning

5.1 Menu structure

Alternative specifications are shown in light grey.

Menu structure

Main menu	Menu level 1	Menu level 2	Description/settings
Quick Start			
	Setup Wizard		
		Sensor type	*Indication of sensor type and serial number if automatically detected, otherwise select from list* ↑↓ K1Ex, K1N, K1L, K1E K4Ex, K4N, K4L, K4E M Q Special
		Middle units	*Select from list* ↑↓ m/s, f/s, in/s, m3/h, m3/min, m3/s, l/h, l/min, l/s, USgall/h, USgall/min, USgall/s, bbl/d, bbl/h, bbl/min, g/s, t/h, kg/h, kg/min, m3, l, Usgall, bbl, g, t, kg W, kW, MW, J, kJ, MJ, Sig dB (signal), noise dB, SNR, C m/s (sound speed), CU (housing temperature) SOS, DEN, KIN, SHC (medium parameters) TEMP, Tin, Tout (compensation, inlet and outlet temperature) Math
		Pipe material	*Select from list* ↑↓ Stainless steel, Carbon steel Ductile cast iron, Grey cast iron Copper, Lead PVC, PP, PE, ABS Glass, Cement, User
		Pipe c-speed	*Only if user pipe material selected* 600 ... 6553.5 m/s
		Outside diameter	6 ... 6500 mm
		Wall thickness	0.5 ... 75 mm
		Fluid	*Select from list* ↑↓ Water, Salt water Acetone, Alcohol, Ammonia Carbon Tet (carbon tetrachloride) Ethanol, Ethyl alcohol, Ethyl ether Ethylene glycol, Glycol/water 50% Kerosene, Methanol, Methyl alcohol Milk, Naphtha, Car oil Freon R134a, Freon R22 Hydrochloric acid, Sour cream, Sulphuric acid Toluene, Vinyl chloride User (enter kinematic viscosity, density, medium c-speed)
		Kinematic viscosity	*Only if user fluid selected* 0.001 ... 30000 mm^2/s
		Density	*Only if user fluid selected* 100 ... 2000 kg/m^3
		Medium c-speed	*Only if user fluid selected* 800 ... 3500 m/s

		Temperature	-30 ... 300 °C
		Liner Material	*Select from list* ↑↓ None, Epoxy, Rubber, PVDF, PP, Glass, Cement, User (liner c-speed)
		Liner c-speed	*Only if lining material selected* 600 ... 6553.0 m/s
		Liner thickness	*Only if lining material selected* 1.0 ... 99.0 mm
		Passes	*Select from list* ↑↓ Auto 1 … 16
	Totaliser		Off, On Reset+ (positive total), Reset - (negative total) Reset both
Installation

		Source (value)	*Select from list* ↑↓ *Density, Viscosity, Temperature, Other*
			Minimum, Maximum, Span settings as on outputs
	PT100		*Temperature inputs*
		Source	Fixed – *A fixed temperature can be entered under value* PT100 – *Value read from PT100 temperature sensor in ºC*
		Value	*Enter fixed user defined value*

			0 ... 250 ºC
		Offset	*Enter fixed user defined value* -100 ... 100 ºC
	RS 485		[where specified]
	Modbus RTU		[where specified]
	HART		[where specified]
System			
	Instrument information		
		Model Code	170
		Serial No.	*Example:* 17000026
		HW Revision	Hardware version (system, ultrasonic board)
		SW Revision	Software version (system, ultrasonic board)
	Calculation		
		Low F Cut	± *Low flow velocity cut off* 0 ... 0.025 m/s
		Max F Cut	± *Maximum flow velocity cut off* 0 ... 30 m/s
		Corrected	*Apply flow velocity profile correction* Yes, No
		PV Offset	*Calibration process variable zero offset* -30 ... 30 units
		PV Scaling	*Calibration process variable gradient scaling* 0 ... 10000 units
		Zero Cal	*Zero calibration settings*
		Zero	*Perform auto zero calibration* Yes, No
		Track	*Track zero offset* Yes, No
		Delta	*Zero flow delta time offset in ns, read from sensor PROM or entered directly for special sensors*
		Timeup	*Upstream transit-time offset in µs, allows for fixed delays in special sensors, buffer rods and extension leads*
		Math Functions	*None, sum, difference, average, maximum*
		Heat Capacity	Specific heat capacity of medium
	User		
		Identifier	*Example:* Pump P3A *9 character string*
		Tag No.	*Example:* 1FT-3011 *9 character string*
		Password	Four digit operator code
	Test		
		Installation	*Control system simulation: 60 second increase of flow velocity in m/s from 0 to programmed Max F Cut, then 60 second decrease, i.e. the process variable changes over complete possible range. All configured outputs exhibit their programmed behaviour.* Yes/No
			Test modes also available for display, keypad, memory, peripheral and ultrasonic components
	Settings		
		Date, Time, Date Format	*Enter or select from list*

		Language	*Select from list ↑↓(as available)* English, German, French
		Keypad	*Enable keypad sound* Yes/No
	Defaults		*Reload factory default settings, except date/time* Yes/No
	Key lock		*Yes, No (locks keys until password is entered)*
Diagnostics			[where specified]
Datalogger			[where specified]
	Interval		Enter logging interval in seconds ('0' for off, 0..999s)
	Selection		*Select up to 10 items from list ↑↓* m/s, f/s, in/s, m3/h, m3/min, m3/s, l/h, l/min, l/s, USgall/h, USgall/min, USgall/s, bbl/d, bbl/h, bbl/min, g/s, t/h, kg/h, kg/min, m3, l, Usgall, bbl, g, t, kg W, kW, MW, J, kJ, MJ, Sig dB (signal), noise dB, SNR, C m/s (sound speed), CU (housing temperature) SOS, DEN, KIN, SHC (medium parameters) TEMP, Tin, Tout (compensation, inlet and outlet temperature) Math
	Low memory		Logger space remaining at low memory alarm
	Log Wrap		*Saves "selected" items as a continuous stream without headers (Note : this means files cannot be processed by KATData+)* *Yes/No*
	Log Download		Send logger data using communication port
	Log Erase		Erase data on logger (clear logger)
Serial Comms			[where specified]
	Mode		*Select from list ↑↓* None, Printer (continuous 1 s serial ASCII output), Diagnostic, Download (logger), Calibration test (factory)
	Baud		*Select from list ↑↓* 9600, 19200, 57600, 115200
	Parity		*Select from list ↑↓* None, Even, Odd
	Type		RS232, RS485, etc. (as installed)

Table 5: Firmware menu structure

5.2 Diagnostics [where specified]

Diagnostic screens, where specified, can be viewed directly during measurement through the menu structure.

5.3 Display settings

The main Process Value (PV) is the primary measurement data. Customer specific settings for data to be displayed can be set in the appropriate menu items. The PV can be selected from a list of available items.

5.4 Output configuration

Serial interfaces

5.4.1 Serial interface RS 232

The RS 232 serial interface can be used to transmit data on-line over distances up to 15 m or for device configuration and maintenance tasks.

5.4.2 Serial interface RS 485

The RS 485 serial interface can be used to transmit data on-line for distances up to 1200 m. This is achieved by directing the ASCII printer output via the RS 485 interface.

5.4.3 Modbus RTU

The RS 485 interface is used for networking up to 32 flowmeters to a centralised computer system. Each flowmeter is given an unique address to be able to communicate effectively. The communication protocol used conforms to the conventions of the Modbus RTU protocol, a description of which is given in a separate document. Please refer to customer support for further information.

Wiring	Setup	Please refer to customer support.
Operation	Please refer to customer support.

5.4.4 HART compatible output

The KF170 can also be configured with an optional module which responds to output commands conforming to the HART protocol. Please refer to customer support for further information.

HART® is a registered trademark of the HART Communication Foundation.

Wiring	Setup	Please refer to customer support.
Operation	Please refer to customer support.

Analogue outputs

5.4.5 Analogue current output 0/4 ... 20 mA

The analogue current outputs operate in a 4 ... 20 mA or 0 ... 20 mA span.

Current outputs may be assigned to process values in the “mode” section of the output menu. The outputs can be programmed and scaled within the menu structure.

Wiring	Electrical characteristics	0/4 … 20 mA active and 4 … 20 mA passive options Galvanically isolated from main electronics and from other I/O's Passive: U = 9 … 30 V, R_{Load} = 50 Ohm typical, resolution 16 bit, accuracy 0.1 % of MV Active: R_{load} < 500 Ohm, U = 30 V, resolution 16 bit, accuracy 0.1 % of MV

5.4.6 Analogue voltage output 0 ... 10 V

Voltage outputs may be assigned to process values in the “mode” section of the output menu. The outputs can be programmed and scaled within the menu structure.

Wiring	
Electrical characteristics	Galvanically isolated from main electronics and from other I/O's Range 0 … 10 V, R_{load} = 1000 Ohm, resolution 16 bit, accuracy 0.1 % of MV

5.4.7 Analogue frequency output

Frequency outputs may be assigned to process values in the “mode” section of the output menu. The outputs can be programmed and scaled within the menu structure.

Wiring	Electrical characteristic	Galvanically isolated from main electronics and from other I/O's Open-Collector circuit, range 2 ...10000 Hz, U = 24 V, I_{max} = 4 mA

s	

Digital outputs

5.4.8 Digital open collector output

Open-Collector outputs may be assigned to process values in the “mode” section of the output menu. The outputs are configured using the menu structure.

The totaliser function is enabled and controlled using the menu structure.

Wiring	Optically switched relay "Open-Collector" (optional) 
Electrical characteristics	Galvanically isolated from main electronics and from other I/O's Totaliser pulse value 0.01...1000 1/unit, active high and active low switch type available, width 1 … 990 ms, U = 24 V, I_{max} = 4 mA

5.4.9 Digital relay output

Relay outputs may be assigned to process values in the “mode” section of the output menu. The relay outputs are configured using the menu structure.

Wiring	Electrical characteristics	Form A (SPDT-NO and NC) contacts Width 3 … 990 ms U = 48 V, I_{max} = 250 mA Galvanically isolated from main electronics and from other I/O's Operating modes: Alarm, fault, totaliser (programmable) 1 off form A (SPST-NO) contacts 1 of form A (SPST-NC) contacts

5.5 Input configuration

5.5.1 PT100 inputs

Inputs

Wiring	Temperature input PT100, 4 wire (optional)  Temperature input PT100, 3 wire (optional) 
Electrical characteristics	3 and 4 wire options Galvanically isolated from main electronics and from other I/O's Temperature range -50 ... 400 °C Resolution 0.01 K

	Accuracy ±0.1 K

5.5.2 Analogue current input 0/4 ... 20 mA

Wiring	Electrical characteristics	Active or passive wiring Measuring range active 0 ... 20 mA at 30 V Measuring range passive 4 ... 20 mA Accuracy 0.1 % of measured value

5.6 Temperature compensation (TC) – [where installed]

With temperature compensation enabled the temperature dependency of the medium in relation to speed-of-sound, viscosity and density calculations will be compensated for. This is in particular useful for hydrocarbon measurement applications.

The In/Output menu will then allow the user to select the temperature input source; either PT100 temperature sensors or via a 0/4 … 20 mA input channel.

5.7 Sound velocity measurement (SVM)

The measured sound velocity (SOS) is available as a Process Value and as diagnostic function (where specified) during measurement and may be applied to a Process Output by selecting “C m/s” from the appropriate menu.

This option is used for speed-of-sound, interface detection, product recognition, pig detection and concentration measurement applications.

5.8 Dual-channel flow calculations (maths functions)

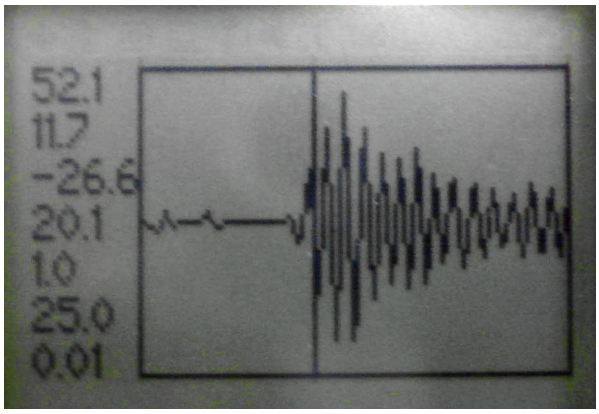
Where suitably equipped, dual channel calculations are available from the System/Calculation/Math menu.

These allow the user to select the sum, difference, average (mean) or maximum of the two flow channels.

This value may be displayed or applied to a Process Output by selecting MATH from the appropriate output menu.

5.9 Scope function

Katronic flowmeters have an additional scope function which shows a representation of the pulse received by the sensors on Channel 1.



In addition to displaying the received pulse, this screen lists the following data (from top to bottom) :

Gain (dB)
Signal (dB)
Noise (dB)
Transit time (us)
Delta (ns) - [time downstream minus time upstream]
Control unit temperature (degC)
Flow (m/s)

6 Maintenance

The KATflow 170 flowmeters are maintenance free concerning the flow measurement functions. Within the scope of periodic inspections required for electrical equipment installed in hazardous areas, regular inspection for signs of damage or corrosion is recommended for the transducers, the junction box if installed, and the explosion-proof flowmeter housing.

6.1 Opening/closing the KF170 Ex d compartment

DANGER
The following instructions must always be carefully followed if opening the Ex d compartment of the KF170 transmitter. Ensure similar care is taken to close it when work is complete.

Before opening:

- Make certain that there is no explosion hazard.
- Site policies must be followed and all required documentation obtained before commencing work.
- Make sure that all connecting cables are safely isolated from all external sources.
- Allow the electronics to de-energize before opening the electronics compartment of the explosion-proof housing. Wait at least 10 minutes before opening.
- When the instructions above have been strictly followed, the cover of the explosion-proof compartment may be opened. Unlock the locking screw and carefully turn the cover.

Closing:

- Screw the cover of the Ex d compartment and tighten it firmly and lock it with the locking screw using a suitable Allen key.

6.2 Service/Repair

The KATflow 170 flowmeter has been carefully manufactured and tested. If installed and operated in accordance with the operating instructions, no problems are usually experienced.

Should you nevertheless need to return a device for inspection or repair, please pay attention to the following points:

!

- Due to statutory regulations on environmental protection and safeguarding the health and safety of our personnel, the manufacturer may only handle, test and repair returned devices that have been in contact with products without risk to personnel and environment.
- This means that the manufacturer can only service this device if it is accompanied by a Customer Return Note (CRN) confirming that the device is safe to handle.

If the device has been operated with toxic, caustic, flammable or water-endangering products, you are kindly requested:

!

- to check and ensure, if necessary by rinsing or neutralising, that all cavities are free from such dangerous substances,
- to enclose a certificate with the device confirming that is safe to handle and stating the product used.

7 Troubleshooting

Should there be the need to call customer service, please let us know the following details:

- Model code
- Serial number
- SW, HW revision
- Error log list

Possible error messages may include the following:

Error list

Error message	Group	Description	Error handling
USB INIT FAIL	Hardware	Internal board communication error	Power on/off, otherwise call customer support
NO SERIAL NO.	Hardware	Failed to read from FRAM	Call customer support
NO VERSION NO.	Hardware	Failed to read from FRAM	Call customer support
PARA READ FAIL	Hardware	Failed to read from FRAM	Load defaults, otherwise call customer support
PARA WRITE FAIL	Hardware	Failed to write to FRAM	Load defaults, otherwise call customer support
VAR READ FAIL	Hardware	Failed to read from FRAM	Call customer support
VAR WRITE FAIL	Hardware	Failed to write to FRAM	Call customer support
SYSTEM ERROR	Hardware		Call customer support
VISIBILITY ERR	Hardware	Failed to read from FRAM	Call customer support
FRAM LONG WRITE ERR	Hardware	Failed to write to FRAM	Call customer support
FRAM READ ERR	Hardware	Failed to read from FRAM	Call customer support

COMM READ RAW ERR	Hardware	Internal communication error	Power on/off, otherwise call customer support
COMM READ HISTORY ERR	Hardware	Internal communication error	Power on/off, otherwise call customer support
COMM CRC ERR	Hardware	Internal communication error	Power on/off, otherwise call customer support
SENSOR COUPLING ERR	Application	Weak sensor coupling, low SNR	Recouple sensors, check installation, reduce number of passes, look for other location, call customer support

Table 6: Error messages

7.1 Data download difficulties

If difficulties are encountered downloading the logger data : -

- Check that the flowmeter is switched on and not in measurement mode.
- Check that the same number COM port is allocated in the “Device Manager” (or equivalent) as is set in the KatData+ software.
- Check that the settings (baud, parity, word length, stop bits) are identical.
- Use the supplied connectors – whether connecting to a 9-pin COM port or converting from serial communication to a Universal Serial Bus (USB).
- Is the logger in "Wrap" mode? If "yes", use a terminal program and the "Log download" command. If "No", KatData+ software may also be used.

9 Specification

General

Measuring principle : Ultrasonic time difference correlation principle
Flow velocity range : 0.01 ... 25 m/s
Resolution : 0.25 mm/s
Repeatibility : 0.15 % of measured value ±0.015 m/s
Accuracy :
Volume flow
± 1 ... 3 % of measured value depending on application,
± 0.5 % of measured value with process calibration
Flow velocity
± 0.5 % of measured value
Turn down ratio : 1/100
Gaseous and solid content of liquid media : < 10 % of volume

Flowmeter

Manufacturer	Katronic Technologies Ltd. Earls Court, 13 Warwick Street Earlsdon Coventry CV5 6ET UNITED KINGDOM Quintex GmbH D-97922 Lauda-Königshofen GERMANY
Marking	*Gas groups* II 2G Ex db eb IIA/IIB T6
Certificate number	EPS 11 ATEX 1355 X
Degree of protection	IP66 according to EN 60529
Temperature limits	Temperature class T6: -20 ... +60 °C

Flow channels : 1 or 2
Power supply : 100 ... 240 V AC 50/60 Hz,
9 ... 36 V DC, special versions on request
Display : LCD graphic display, 128 x 64 dots, backlit
Dimensions : H 237 x W 258 x D 146 mm without cable glands
Weight : Approx. 2.3 kg
Power consumption : < 10 W
Signal damping : 0 ... 99 s
Measurement rate : 1Hz standard, higher rates on application
Operating languages : English, 2 other (as requested and subject to availability)
Response time : 1 s, faster rates upon request
Calculation functions : Average/difference/sum

Quantity and units of measurement

Volumetric flow rate : m3/h, m3/min, m3/s, l/h, l/min, l/s, USgal/h (US gallons per hour), USgal/min, USgal/s, bbl/d (barrels per day), bbl/h, bbl/min, bbl/s.
Flow velocity : m/s, ft/s, inch/s
Mass flow rate : g/s, t/h, kg/h, kg/min
Volume : m^3, l, gal (US gallons), bbl
Mass : g, kg, t
Heat flow : W, kW, MW (only with heat quantity measurement option)
Heat quantity : J, kJ, MJ (only with heat quantity measurement option)

Sig dB (signal), noise dB, SNR,
C m/s (sound speed), CU (housing temperature)
Tin, Tout (inlet and outlet temperature)

Internal data logger

Storage capacity : In excess of 1 million data points (16MB)
Logging data : Up to ten selected variables

Communication
Serial interface : RS 232, RS 485 (optional)
Data : Instantaneous measured value, parameter set and configuration, logged data

KATdata+ Software
Functionality : Downloading of measured values/parameter sets, graphical presentation, list format, export to third party software, on-line transfer of measured data
Operating systems : Windows 2000, NT, XP, Vista, 7; Linux; Mac (optional)

Process inputs / Process Outputs (maximum of five per instrument)

Inputs
Temperature : PT 100, three or four-wire circuit, measuring range - 50 ... 400 °C, resolution 0.1K, accuracy ±0.2 K
Current : 0 ... 20 mA active or 4 ... 20 mA passive, U = 30 V, R_i = 50 Ohm, accuracy 0.1 % of MV

Outputs
Current : 0/4 ... 20 mA, active (R_{Load} < 500 Ohm), 16 bit resolution, U = 30 V, accuracy = 0.1 %
Voltage : On request, 0 ... 10 V, R_i =500 Ohm
Frequency : On request
Digital (Optical - Open Collector) : U = 24 V, I_{max} = 4 mA
Digital (relay) : Form C (SPDT-CO) contacts, U = 48 V, I_{max} = 250 mA

Clamp-on sensors

Manufacturer	Katronic Technologies Ltd. Earls Court, 13 Warwick Street Earlsdon Coventry CV5 6ET UNITED KINGDOM
Marking	*Gas groups* II 2G Ex mb II T6 - T4 X *Dust groups* II 2D Ex mbD 21 IP68 T80°C - T120°C X
Certificate number	TRAC 09 ATEX 21226X
Degree of protection	IP68 according to EN 60529
Temperature limits	Temperature class T4: -50 ... +115 °C Temperature class T5: -50 ... +90 °C Temperature class T6: -50 ... +75 °C

Diameter range :
Type K4Ex: 10 ... 250 mm
Type K1Ex: 50 ... 3000 mm
Dimensions : 60 x 30 x 34 mm
Material : Stainless steel
Protection method : Encapsulation

Declaration of Conformity

We, Katronic Technologies Ltd., declare under our sole responsibility that the products listed below to which this declaration relates are in conformity with the EEC directives:

EMC Directive 2004/108/EC for Electromagnetic Compatibility
Low Voltage Directive 2006/95/EC for Electrical Safety

Description of products:

Ultrasonic flowmeters KATflow 100, 150, 170, 200 and 230 with associated KATRONIC transducers

The mentioned products are in conformity with the following European Standards:

Class	*Standard*	*Description*
EMC Directive	*BS EN 61326-1:2006*	*Electrical equipment for measurement, control and laboratory use - EMC requirements*
Immunity	*BS EN 61326-1:2006*	*Electrical equipment for continuous unattended use*
	BS EN 61000-4-2:1995	*Electrostatic discharge*
	BS EN 61000-4-3:2006	*RF field*
	BS EN 61000-4-4:2004	*Electric fast transient/burst*
	BS EN 61000-4-5:2006	*Surge*
	BS EN 61000-4-6:2009	*RF conducted*
	BS EN 61000-4-11:2004	*AC mains voltage dips and interruption*
Emission	*BS EN 61326-1:2006*	*Electrical equipment Class B*
	BS EN 55022:2010	*Disturbance voltage Class B*
Low Voltage Directive	*BS EN 61010-1:2010*	*Safety requirements for electrical equipment for measurement, control and laboratory use*

Coventry, 31 August 2012

For and on behalf of Katronic Technologies Ltd.

Andrew Sutton
Managing Director

Reg. No. GB03/58999
